About Industrial Labeling Systems

Industrial Labeling Systems is a leading provider of labeling, barcoding, data collections systems and supplies. As a complete solutions provider of Automatic Identification (Auto-ID), we offer a comprehensive line of products and services, all engineered to meet your needs.

Our strength is our talented team. Without a highly skilled and trained staff, we would not be able to offer you the world-class products and services you have come to expect from Industrial Labeling Systems.

Our approach to business is simple: it all starts with you and your needs.

We start by specifying the “right” label for your application. After all, everything is based around the label. Our extensive label material and size offerings allow us to match the right label to any application.

We then assist you in selecting the appropriate label/barcode printing system. We consider the printing system’s speed, resolution, durability, cost, as well as the flexibility of the software before making a recommendation. There are many printers and labeling software available. We make sure you buy the one that matches your needs.

If you prefer to purchase pre-printed labels, we can assist you in that as well. Industrial Labeling Systems has complete custom label manufacturing and service bureau printing capabilities.

How about being able to automatically print and apply the labels onto your products, all at the same time? Our automated Print/Apply Systems can precisely apply the tiniest of labels onto the edge of a printed circuit board, apply a product ID label, or corner-wrap a paper label onto a corrugated box. Let our application engineers help you implement a system to fit your needs.

Next comes the data collection! No matter how complex the application, Industrial Labeling Systems can implement a barcode or RFID based data collection system to meet all requirements. It could be a “stand-alone system, capable of collecting the necessary data and printing the required reports, or it could be a wireless network linked to your host accounting, MRP or ERP software for live data validation and update using mobile PocketPC devices with integrated barcode or RFID scanning.

Whenever possible, we will try to utilize off-the-shelf software-hardware combinations to build your solution. However, if customization is necessary, our expert software development team will develop the software application to your exacting requirements.

Once we have implemented your solution, our after-sale staff will partner with you for years to come, in upgrades, maintenance, growth and general support.

This product catalog was designed to give you a simple way of selecting the products you need. However, please do not hesitate to contact our Sales or Customer Service team for assistance. It would be our pleasure to assist you in selecting a product to match your specific needs.

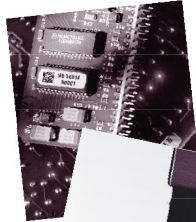

Thank you for trusting Industrial Labeling Systems Corporation as your partner for labeling, barcoding and data collection.

Barcode & RFID Data Collection Solutions

Industrial Labeling Systems is a complete solutions provider of barcode and RFID based data collection systems for all applications. World-class customized solutions are implemented as a result of our extensive experience in designing, configuring and integrating

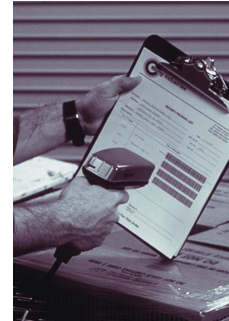

high performance yet cost effective systems for identifying and tracking materials, products, assemblies, work flow, finished goods and assets.

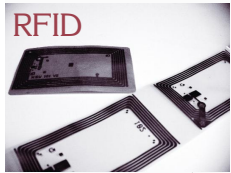

Manufacturing Floor As raw materials and components are worked on through the manufacturing process, data collected at each step is tracked and a complete picture of work in process is instantly available at any time. A complete history for individual items and product configuration is recorded. Fixed and handheld barcode scanners, printers and wireless networks enhance production flexibility.

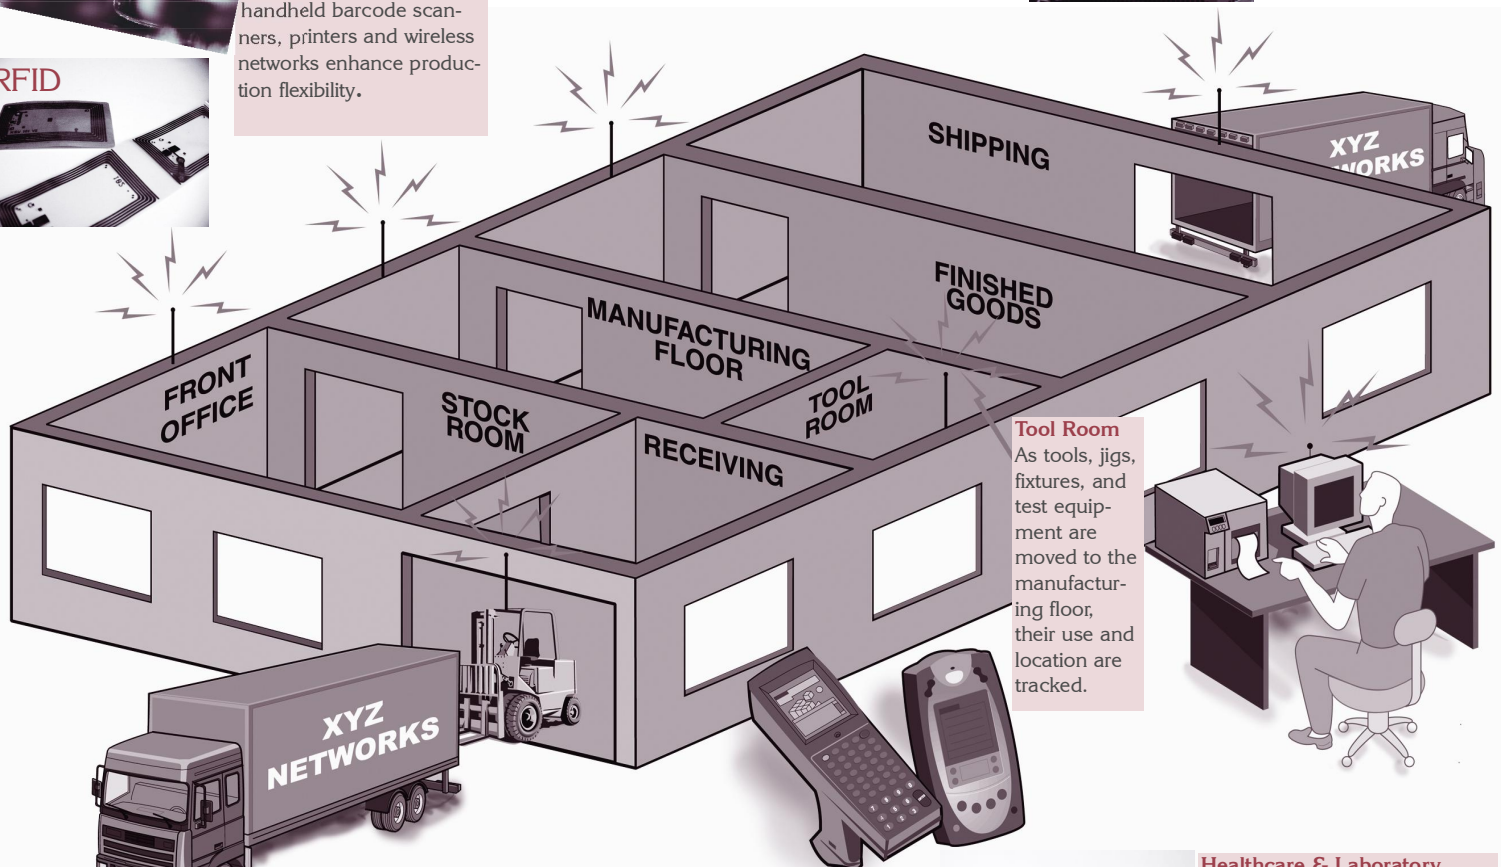

Warehouse/Distribution As products come off the production line, each is placed in warehouse inventory. Handheld and vehicle-mounted terminals assist in put-away and picking of products, as well as cycle counting.

Shipping/Transportation Scan all outgoing boxes and print compliance labels that meet your customer's specifications.

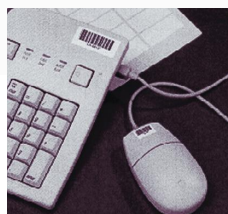

RFID

Tool Room As tools, jigs, fixtures, and test equipment are moved to the manufacturing floor, their use and location are tracked.

Receiving Handheld, fixed and vehicle mounted terminals check arriving shipments of goods and materials against purchase orders. Items are put away after incoming inspection.

Asset Tracking Scan all your fixed assets and manage the location, description and owner of each with this system. A Palm OS based handheld computer with an integrated laser scanner helps you collect the necessary data while a Windows PC based application gives you the management and reporting you need.

Healthcare & Laboratory Environment Tracking Systems can assist in tracking lab samples, vials, vial tops, slides, well plates, beakers, specimens, patient charts, lab instruments, equipment and other laboratory and healthcare related data

Label Printing Systems

- Complete System
 - Printer
 - Software
 - Communications Cable
 - Installation & Training

Labels & Ribbons

- Stock Labels & Ribbons
- Custom Labels

Automated Print & Apply Systems

- Full or semi-automatic
- Label application in different angles

Data Collection Systems

- Barcode & RFID based systems
- WIP Tracking
- Asset Tracking
- Inventory Tracking
- Barcode and RFID readers

Advanced Enterprise Level Software Solutions

- ERP and MRP Host integration
- Distributed printing
- Custom Software Development
 - Developed To YOUR Specifications

Service

- Preventive Maintenance
- Depot Repair
- On-site Repair
- Service Contracts
 - Silver Plan
 - Gold Plan
 - Platinum Plan

Technical Support

- Telephone Support
- Internet-based Support
- Training
